

Purpose of the company

"Created in 2005, Alcance Rural Planning and Consulting aims to provide agricultural consulting services, making its clients more competitive in their activities."

Feedlot Pium-TO – 8,000 heads of cattle

Our differential

The company Alcance provides consultancy in livestock, visiting in loco the areas where the projects will be or are being executed. After diagnosis, a detailed budget planning of investments in improvements, installations and animal feeding (pasture and forage) is prepared, with a calendar for the execution of the investments.

Once the project is delivered (budget and execution), in the next step, the project is monitored with on-site visits every 45 days for a period of 12 months. In order to monitor the installation of improvements, train the workforce and guide production processes (animal supplementation, planting and pasture management) to ensure the efficiency of the project.

- **Soil collection for analysis.** Interpretation of soil analysis results and liming and fertilization recommendations.

- **Food collection for analysis of nutritional value.** Interpretation of results of analysis of nutritional value of foods and formulations of diets/feeds.

- **Formulation of feed, mineral mixtures** and multiple mixtures (protein salts) and evaluation of commercial supplements used.

- **Guidance on silage, haying, pre-drying.** Guidance for the cultivation of sugarcane and forages for silage.

- **Guidance and monitoring of investments in infrastructure, improvements and machinery.**

- **Management of the agricultural and livestock business:**

Cost management spreadsheets and analysis of the economic result of the activity; cash flow spreadsheets, asset inventory, balance sheet and investment guidance

- **Workforce training (lectures, technical visits, videos)**

- **Feedlot of cattle.**

- **Pasture irrigation.**

- **Training and qualification of technicians through government agencies, as well as university students through Universities.**

Pasto irrigado rende mais que confinamento

Facenda mineira, sujeita à restrição de água, aumenta o rebanho em mais de 50% com a irrigação de apenas 3% da área de pastagem.

Produção média por cabeçote: 9,550 kg ou 266,5 kg

Custo de peso: 765 gramas

Produção total por ha/ano: 96,20 ou 2.946 kg

2010

ESPECIAL PASTAGEM

Irrigação bem administrada

Manejo racional da água e energia é essencial para que projetos irrigados obtenham lucro e se alinhem ao conceito de sustentabilidade

2018

Pastagem

Virada de chave salvadora

No semiárido mineiro, uso de pivô para a produção de silagem evita o racionamento de água e fortalece lucros do Grupo Agropar

2022

Customer Feedback

Carlos Alberto da Silva
Rio Vale Agronegócios - Porangaba-SP

“ My story in agribusiness is divided in: before and after consulting professionals at Alcance Rural. It was a quick, frank and accurate diagnosis. They resized my activity, which started to show results as soon as the measures suggested by them were implemented.

Alcance Rural I used, use and recommend. ”
